PROFILE

Mechatronics and Industrial Automation & Robotics engineer with experience spanning engineering project controls, automation, manufacturing systems, embedded systems and robotics. Currently working in Project Control at Novartis, supporting overseas engineering projects through scheduling, cost control, reporting and data-driven process improvement. Hands-on experience with Python, MATLAB/Simulink, ROS2, PLC/SCADA, Power BI, embedded systems and autonomous/ADAS projects. Seeking opportunities in Project Engineering, Project Controls, Automation, Controls, Mechatronics or Robotics.

PROFESSIONAL EXPERIENCE

- Novartis, Project Control Engineer (Tech Ops Engineering)07/2025 – Present | Hyderabad
 - Project Controls & Planning:** Support international engineering projects across the **US, Singapore, Austria, Slovenia and Switzerland**, managing timelines, schedules, milestones, deliverables and project reporting using **MS Project** and enterprise tools.
 - Cost & Financial Control:** Support **CAPEX, OPEX and hosted projects**, including cost-saving/cost-avoidance initiatives, monthly cost reporting and project financial tracking.
 - Procurement & Project Setup:** Provide procurement support for **US and Singapore** projects, support project creation for **Austria**, and manage **purchase-order creation for Slovenia and Switzerland**.
 - Reporting & Data Analytics:** Develop **Power BI dashboards and Excel-based reports** for project visibility, cost monitoring, timeline tracking and management reporting; manage project **timesheet tracking**.
 - Process Automation:** Develop **Python-based automation** to extract data from calibration certificates into Excel, reducing manual data-processing effort and improving reporting efficiency.
 - AI & Digitalisation:** Act as an **AI Representative**, promoting AI-enabled ways of working and identifying opportunities for automation and process improvement across the team.
- Sona Comstar, GET (Manufacturing System Engineering)01/2024 – 07/2024 | Chennai, India
 - Supported PCB manufacturing, regulatory compliance and vendor coordination activities.
 - Assisted prototype testing, design validation and failure analysis for manufacturing-process improvement.
- Daimler India Commercial Vehicles Pvt. Ltd., Power Train (Intern)09/2023 – 10/2023 | Chennai, India
 - Supported process optimisation, design validation and quality documentation within powertrain engineering.
 - Used PLC, SCADA and Power BI for process monitoring and engineering data analysis.

EDUCATION

- MIT, Manipal, M.Tech Industrial Automation and Robotics07/2024 – 07/2026 | Manipal, India
- Sathyabama University, B.E Mechatronics Engineering07/2020 – 04/2024 | Chennai, India

SKILLS

Project Engineering & Controls: MS Project, project scheduling, cost controlling, cost avoidance, reporting, Power BI, Excel
Automation & Controls: PLC, SCADA, HMI, industrial automation, control systems, MATLAB/Simulink
Robotics & Autonomous Systems: ROS2, SLAM, LiDAR, path planning, OpenCV, CARLA, Gazebo, reinforcement learning
Programming & Embedded: Python, Embedded C, Assembly, ESP32, Arduino, STM32, AUTOSAR
Engineering Design: SolidWorks, CATIA, AutoCAD, Fusion 360, CAD/CAM

PROJECTS

- ROS2 + Reinforcement Learning for Autonomous Driving:** Developed an RL-based autonomous-navigation system using ROS2 and CARLA, integrating sensor data for real-time decision-making and vehicle control.
- Autonomous Blind Spot Detection System for ADAS:** Developed a LiDAR and ultrasonic sensor-based blind-spot detection system with ESP32 alerts; reported 70% detection accuracy.
- Temperature-Based Stimming Toy for Autism Spectrum Disorder:** Developed an interactive cube using temperature sensing and haptic feedback, with real-time data collection for analysis.
- Force-Feedback Touch-Sensing VR Glove:** Developed a Bluetooth-enabled haptic glove for finger-motion tracking and sensory feedback in VR applications.
- Remote-Controlled Trash & Mines Collection Robot:** Designed a modular robotic platform for hazardous waste collection in inaccessible areas, integrating sensor-based navigation.
- Fertilizer-Spraying Drone with Image Processing:** Developed a remotely operated drone with adjustable-range spraying and telescope-based mechanism for precision agricultural application.

LANGUAGES

English, Tamil, Telugu, Malayalam, Kannada, Hindi

CERTIFICATES

- Self-Driving Cars Specialization (Coursera)
 - Embedded System using C (Coursera)
- Introduction to Automotive Embedded Systems (Coursera)
 - Introduction to programming with MATLAB (Coursera)
- MBSE: Model Based System Engineering (Coursera)
 - MATLAB Onramp training service (MathWorks)
- Introduction to AutoSAR (Coursera)

INTERESTS

Robotics & Automation, ADAS, Motion Planning, Computer Vision & AI, Embedded Systems, Project Management
